N/A	ALL TPMS TOOLS		

### Overview

Wireless devices connected and/or charging in the vehicle may cause the TPMS light to stay on before or after completing a TPMS Relearn on a vehicle.

### Cause

Wireless devices and sensors use RF (Radio Frequencies'). This RF can interfere with each other and this can cause the TPMS light to stay ON.

### Example

2016 Nissan Altima. After completing the OBD relearn, the TPMS Light was still flashing. There was a phone connected to the vehicle via Bluetooth. Once the phone was disconnected, the TPMS light went off.

### Problem Resolution

- 1.) Remove/Disconnect any Wireless Devices from the vehicle.
- 2.) Remove any USB cords from the vehicle.
- 3.) Complete a TIRE PRESSURE LEARN using the Bartec tool.
- 4.) Verify that the TPMS light is turned OFF.

If the issue continues after completing the steps above please call Bartec Technical Support at (866)407-8767 to further assist you with the issue.
